Name John Appleseed

Email user@example.com

Password Required

Description My Email Account

Complete all fields: the email address you want to configure, the incoming mail server (**imap.whiteready.com**), username and password.

Do the same on the outgoing mail server (which is **smtp.whiteready.com**), again entering the username and password

Save configurazione with tap on "**Next**", at right top corner.

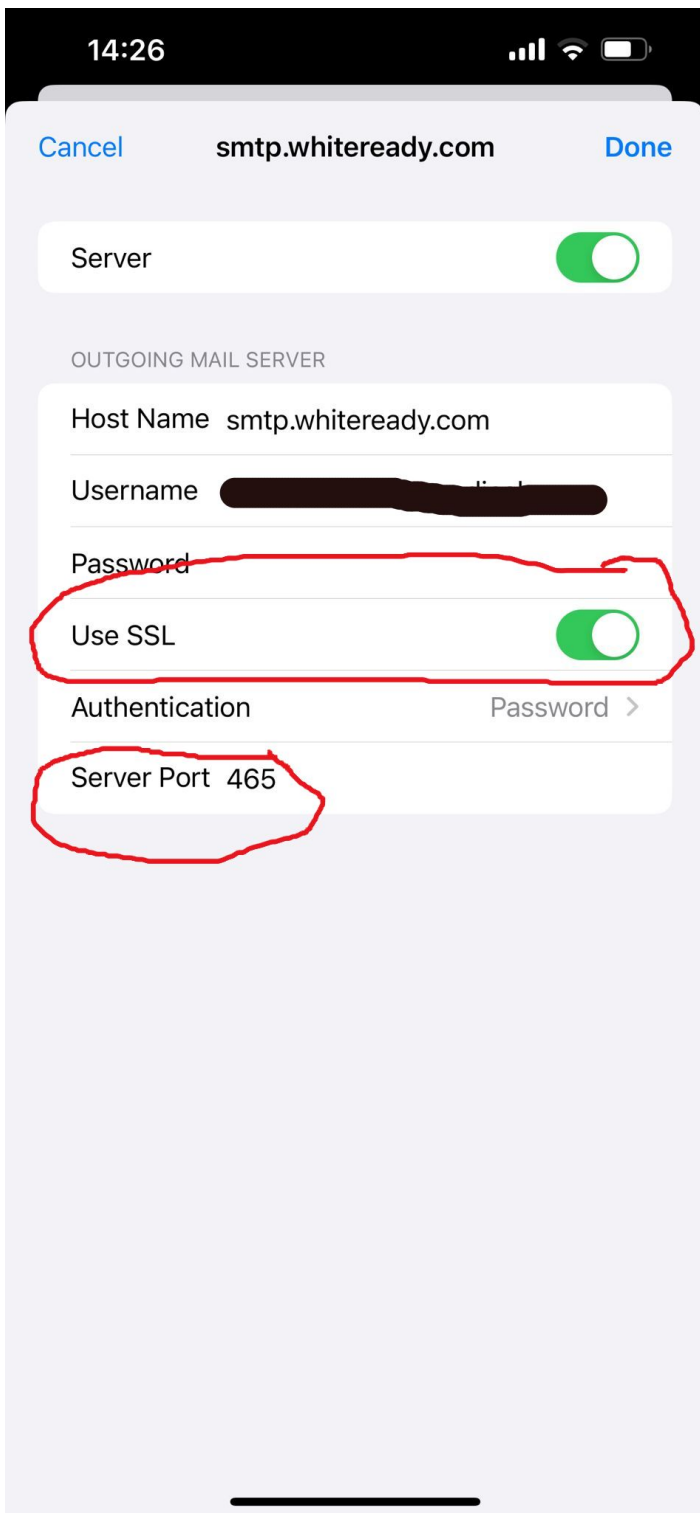

Other settings

Outgoing mail server

Tap on "**Outgoing mail server**" -> **SMTP**, then tap on "**PRIMARY SERVER**"

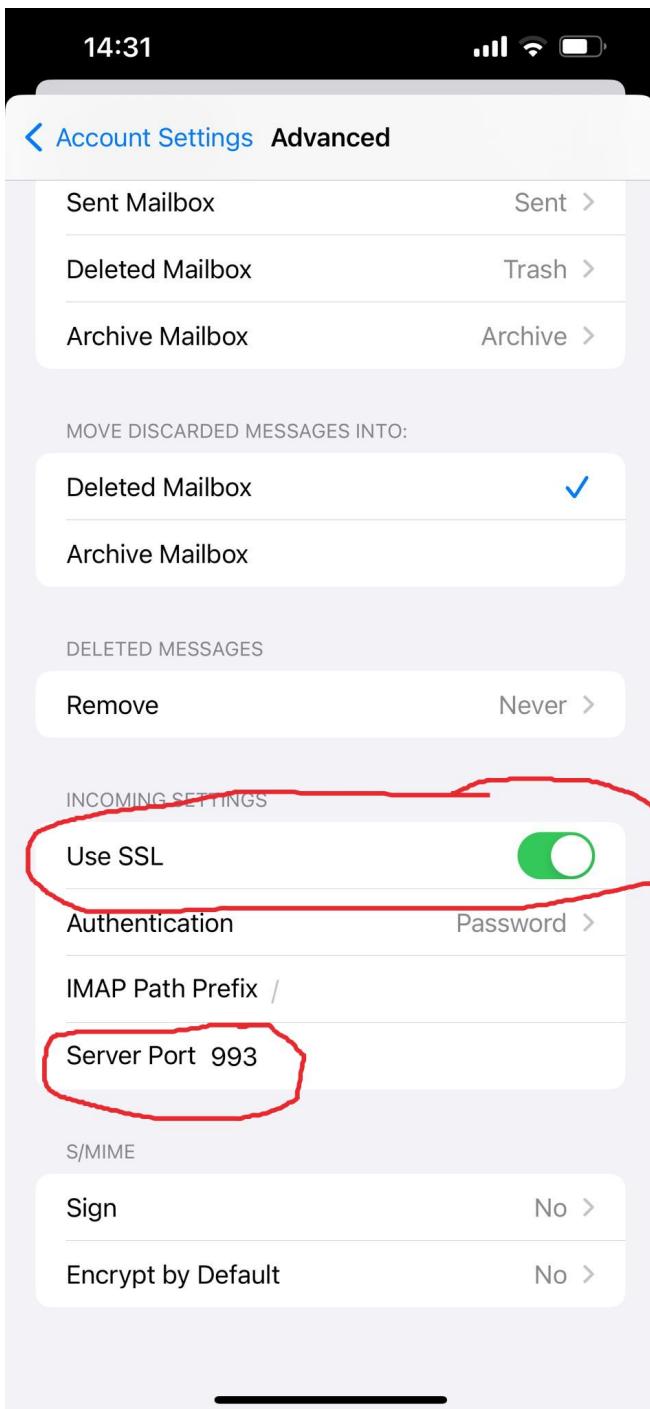

Set hostname (smtp.whiteready.com), username (the same of incoming mail server) and the password, set "On" the SSL flag, check if Server Port is 665.

Tap on "Done", on the right top corner.

At the bottom of this page, you see another button: "**Advanced**". Tap on.

Account settings Advanced

The part that interests us is the one marked in red

Set '**Use SSL**' to 'Active'.

Check that the server port is **993**.
