

Change your mailbox password

When a new mailbox is created (by the domain administrator) a password is also assigned.

This password can be changed by the user himself by going through Webmail, using a simple procedure.

To change and use a new password, simply click on "**Settings**", then on "**Account**", on "**Change password**": enter the old password in the first field, then enter the new password twice (the second time for confirmation) and finally click "**Save**".

The screenshot shows a webmail interface with a sidebar on the left containing icons for Compose, Mail, Contacts, Calendar, Tasks, and Settings. The main area is titled 'Settings' and contains a list of options: Preferences, Folders, Identities, Responses, Account, Filter rules, Blacklist / Whitelist, and Spam protection. The 'Account' option is selected, and the 'Change password' option is highlighted. To the right of the settings list, there is a 'Password' section with three input fields: 'Current password:', 'New password:', and 'Confirm new password:'. A blue 'Save' button is located below the input fields.

As you type your new password, the area on the right will turn colored: the color indicates the level of complexity and reliability of the password you are typing.

The screenshot shows a 'Password' section with three input fields: 'Current password:', 'New password:', and 'Confirm new password:'. The 'New password:' field is active, and a green progress bar is visible on the right side of the field, indicating a strong password. A blue 'Save' button is located below the input fields.

It is essential that the color turns **green**.

After saving, a message will appear briefly: if everything went well, the message is in green and says "**Password saved**", if something went wrong the message will be in **red**.
