

Change your mailbox password

When a new mailbox is created (by the domain administrator) a password is also assigned.

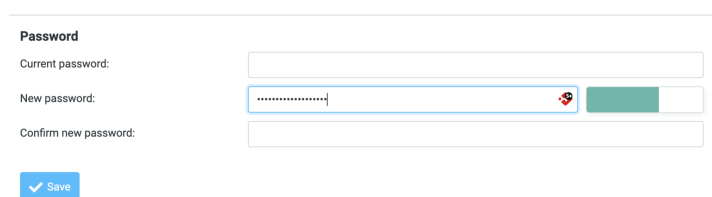

This password can be changed by the user himself by going through Webmail, using a simple procedure.

To change and use a new password, simply click on "**Settings**", then on "**Account**", on "**Change password**": enter the old password in the first field, then enter the new password twice (the second time for confirmation) and finally click "**Save**".

The screenshot shows the Webmail interface. On the left is a sidebar with icons for Compose, Mail, Contacts, Calendar, Tasks, and Settings. The 'Settings' icon is selected. The main area is titled 'Settings' and contains a list of options: Preferences, Folders, Identities, Responses, Account, Filter rules, Blacklist / Whitelist, and Spam protection. The 'Account' option is selected, and the 'Change password' link is highlighted. To the right of the settings list, the 'Password' section is visible, showing fields for 'Current password:', 'New password:', and 'Confirm new password:', along with a 'Save' button.

As you type your new password, the area on the right will turn colored: the color indicates the level of complexity and reliability of the password you are typing.

This is a close-up of the password change form. It has three input fields: 'Current password:', 'New password:', and 'Confirm new password:'. The 'New password:' field is active, showing a green bar on the right side of the input box, indicating a high level of password complexity. A 'Save' button is located below the fields.

It is essential that the color turns **green**.

After saving, a message will appear briefly: if everything went well, the message is in green and says "**Password saved**", if something went wrong the message will be in **red**.
