

How to change password

When a new mailbox is created (by the domain administrator), a password is also assigned.

This password can be changed by the user himself via [Webmail](#), using a simple procedure.

To change and use a new password, simply click on '**Settings**', then on '**Account**', on '**Change Password**': enter the old password in the first field, then enter the new password twice (the second time for confirmation) and finally click '**Save**'.

As you type in your new password, the area on the right will be coloured: the colour indicates the level of complexity and reliability of the password you are typing in.

It is imperative that the colour turns **green**.

After saving, a message will briefly appear: if everything went well, the message is in green and says '**Password saved**', if something went wrong, the message will be in **red**.
